

SPARTA

PLATFORM WHITELISTING GUIDE

April 2023

1. INTRODUCTION

Whitelisting the *.sparta.app domain on your IT system is a process that involves allowing access to any subdomain of the sparta.app website and its associated services. This can be useful for organisations that need to access or collaborate with sparta.app, but want to limit access to certain subdomains.

Here are the steps to whitelist the *.sparta.app domain on your IT system:

1. Identify the firewall or security software that you are using in your IT system. It could be a hardware or software firewall, an antivirus programme, or other security software.
2. Determine the IP addresses or domain names associated with the *.sparta.app domain. This information can be obtained by contacting sparta.app support or by using a domain name lookup service.
3. Configure the firewall or security software to allow access to the IP addresses or domain names associated with the *.sparta.app domain. The specific steps will vary depending on the software you are using, but generally, you will need to create a rule or exception that allows traffic to and from any subdomain of the sparta.app website.
4. Test the connection to the sparta.app website and any associated services to ensure that the whitelisting has been successful. This can be done by accessing any subdomain of the sparta.app website or any other services associated with it.

It is important to note that whitelisting a domain can have security implications, and it is essential to ensure that the domain is trusted and does not pose a threat to your IT system before allowing access. Additionally, whitelisting should only be done when absolutely necessary, and other security measures, such as regular software updates and employee training, should also be implemented to protect your IT system from security threats.

It is worth noting that all of our domains, including *.sparta.app, are secure via SSL over HTTPS encryption to ensure secure communication between our website and your IT system.

2. DOMAIN WHITELIST

If your IT security policies do not allow for wildcard subdomain whitelisting, please ensure that the following domains are whitelisted:

```
sparta.app
ap.sparta.app
api.sparta.app
canned.api.sparta.app
backend.sparta.app
core.sparta.app
diesel.sparta.app
documentation.sparta.app
jet.sparta.app
strapi.sparta.app
naphtha.sparta.app
```
